

## ABSTRAK

# HUBUNGAN ANTARA KECERDASAN EMOSIONAL DAN KOORDINASI MATA KAKI DENGAN KETERAMPILAN BERMAIN FUTSAL ATLET KLUB MUSTIKA PURWOKERTO

*Rifai Ihza Fahrullah<sup>1</sup>, Muhamad Syafei<sup>2</sup>, Rohman Hidayat<sup>2</sup>*

**Latar Belakang:** Futsal merupakan olahraga permainan yang dimainkan 5 lawan 5 dan dimainkan dalam waktu normal yaitu 2x20 menit. Berdasarkan observasi peneliti di klub mustika dengan pelatih kepala, pelatih menyampaikan bahwa pemainnya ketika melakukan *passing*, *dribbling*, *shooting* masih sedikit bergantung melihat bola, yang mengakibatkan pandangan mereka ketika bermain menjadi tidak luas, pelatih juga menyampaikan bahwa para pemainnya mengalami perbedaan dari latihan ke pertandingan, sebagai contoh ketika di latihan mereka berhasil *passing* dengan baik tetapi ketika di pertandingan mengalami penurunan yaitu kesalahan dalam mengumpan.

**Metodologi:** Penelitian ini menggunakan metode deskriptif kuantitatif. Penelitian ini dilaksanakan di klub Mustika purwokerto. Sampel 20 atlet dengan teknik total sampling. Analisis data dengan melakukan uji normalitas shapiro wilk lalu uji linieritas. Data yang sudah terdistribusi normal dan linier kemudian dilakukan uji korelasi pearson dan korelasi ganda untuk mendapatkan hasil penelitian.

**Hasil Penelitian :** Berdasarkan hasil analisis data pada penelitian ini diperoleh nilai  $r = -0,658$  antara X1 dengan Y. Nilai  $r = -0,581$  antara X2 dengan Y. Data menjadi – (negatif) karena data dihitung dengan kecepatan. Sedangkan hasil dari korelasi ganda menunjukkan nilai signifikansi sebesar 0,000. . Terdapat sumbangan efektif dari X1 terhadap Y sebesar 35,7%, sedangkan X2 memberikan sumbangan efektif terhadap Y sebesar 25,4%. Pada sumbangan relatif X1 memberikan sumbangan terhadap Y sebesar 0,6, sedangkan X2 memberikan sumbangan relatif terhadap Y sebesar 0,4.

**Kesimpulan :** Berdasarkan hasil penelitian dan pembahasan maka dapat ditarik kesimpulan bahwa terdapat hubungan yang signifikan antara X1 dengan Y dengan nilai  $r = -0,658$ . Terdapat hubungan yang signifikan antara X2 dengan Y dengan nilai  $r = -0,581$ . Terdapat hubungan yang signifikan antara X1 dan X2 dengan Y nilai signifikansi 0,000. Terdapat sumbangan efektif dari X1 terhadap Y sebesar 35,7%, sedangkan X2 memberikan sumbangan efektif terhadap Y sebesar 25,4%. Pada sumbangan relatif X1 memberikan sumbangan terhadap Y sebesar 0,6, sedangkan X2 memberikan sumbangan relatif terhadap Y sebesar 0,4.

**Kata Kunci:** Kecerdasan Emosional, Koordinasi Mata Kaki, Keterampilan bermain futsal, Futsal

## ABSTRACT

### THE RELATIONSHIP BETWEEN EMOTION INTELECTUAL AND ANCKLE COORDINATIOAN WITH PLAYING SKILL OF FUTSAL'S ATHELETE IN CLUB MUSTIKA PURWOKERTO

*Rifai Ihza Fahrullah<sup>1</sup>, Muhamad Syafei<sup>2</sup>, Rohman Hidayat<sup>2</sup>*

**Background** :Futsal is a game of sports that every team will playing 5 against 5 player in the court and the duration for the normal time have around 2x20 minutes. According the research with the head coach of Mustika Purwokerto, the coach told that his players still watching the ball when their do *passing, dribbling, shoting*, it will restriction their vision as result, the coach also told that his players have difference when their in training to the match. For instance, when in the training they can do better *passing* but unfortunately in the match they had have reducing such as mistake in do *passing* the ball.

**Methodology** : This research was using descriptive quantitative method. This research have demonstrated in Mustika Purwokerto. The sampel was using 20 atheletes with the total sampling's technique. The data analysis were using Shapiro wilk normality test and then was using linierity. The data have been distributed with the normal and linier afterward it had have corelation pearson tested and double corelation for having the result of research.

**The Result** : According the result of data analysis for the research obtained that the value of  $r = - 0,658$  between X1 and Y. The value of  $r = - 0,581$  between X2 and Y. Because, The data was count using speed so the data became – ( negative ). Meanwhile, the result of the double corelation indicate significant values for about 0,000. It had have effective donation from X1 toward Y for about 35,7%, besides X2 have given effective donation toward Y for about 25,4%. In the relative X1 donation have given donation toward Y for about 0,6%, at the same time X2 have given relative donation toward Y for about 0,4%.

**Conclusion** : According the result and the discussion of the research so it can be seen that it had significant relation between X1 and Y with the value of  $r = - 0,658$ . It had significant relation between X2 and Y with the values of  $r = - 0,581$ . It also had significant relation between X1 and X2 with Y with the signification values 0,000. It had have effective donation from X1 toward Y for about 35,7%, besides X2 have given effective donation toward Y for about 25,4%. In the relative X1 donation have given donation toward Y for about 0,6%, at the same time X2 have given relative donation toward Y for about 0,4%.

**Key Words** : Intellectual Emotion, Ankle Coordination, Futsal Skill, Futsal.
