

CHAPTER V

CONCLUSION AND SUGGESTION

This very last chapter includes two main parts which are conclusions and suggestions. The conclusions provide the summary of the whole findings and discussions related to the formulation and the objectives of the study. Then for the suggestions section, it provides some recommendations to the academic societies, readers, and researchers.

5.1 Conclusions

This research focuses on the multi-word expressions and noun plus verb super sense categorization used by Epica for their song lyrics in the album *The Holographic Principle*. After analyzing 196 expressions found in total 11 songs taken from the verse, scream, and refrain section of the song using Schneider's multi-word expression and super sense categorization, the researcher concludes that Epica used expression especially multi-word expression in their song to create tension of fantasy theme. These expressions spread evenly in each song but there are two main expressions that really given more attention from Epica to depict the undergo story of fantasy. They are cognition noun and cognition verb. With total 10.81% or 32 times found in the album making the cognition noun as the highest

expression used by Epica in their album. Then 8.45% or 25 times found, cognition is the most frequent verb expression used by Epica for their album The Holographic Principle. It can be seen from the analysis that Epica use both noun and verb expression for their lyric.

5.2 Suggestions

5.2.1 Suggestion to linguistic students

This research can be a reference for further study of semantic, especially in expression word. This research can be an example that languages flow as the society grows, and as linguistic student, it is expected that they can give an in-depth focus on how to overcome the barrier in a certain language which is, in this case, English. By giving out the understanding of how language expressed, students are expected to be able to make systematic approach to this language barrier.

5.2.2 Suggestion to researcher

There are still many weaknesses found in this analysis. This research only analyzed one album from one band from one genre and limited only using multi-word expression with noun and verb categorization. There are still lots form of language creative usage other than in a song lyric and lots of defining theory about language expression. The researcher expects that in the future, the other researcher can conduct a further study especially about language usage in a creative based communication such as comedy, poem, novel, short story, movie script, or even

song from another genre using another theory and the latest understanding about expression in a language.

5.2.3 Suggestion to readers

This research provides information and knowledge about multi-word expression and noun also verb super sense categorization. This research is expected to give more insight about how expression can behave inside a phrase in a language to broader audience. The researcher hopes that by having an in-depth understanding about language's expression, people can overcome the barrier of the tension from dictionary-based word and single word usage.
