

## ABSTRAK

Perairan Kabupaten Kebumen memiliki potensi sumber daya ikan yang besar. Status perikanan tangkap di Kabupaten Kebumen meliputi perkembangan jumlah nelayan/RTP, kapal penangkapan, alat tangkap, volume produksi penangkapan, nilai produksi perikana, jenis dan hasil tangkapan ikan. Hasil penelitian nelayan kebumen termasuk kedalam kategori nelayan kecil berdasarkan penggunaan jenis perahu kurang dari 5 GT dan perahu motor tempel. Jumlah pertumbuhan nelayan dan jumlah perahu penangkapan di Kabupaten Kebumen meningkat sepanjang tahun 2016-2020. Jenis alat tangkap yang digunakan nelayan di kabupaten Kebumen diantaranya jaring insang tetap, jaring insang hanyut, *trammel net*, pancing dan bintur. Volume produksi dan nilai produksi perikanan tangkap kebumen menurun pada tahun 2020 karena adanya pandemi covid-19. Potensi jenis hasil tangkapan nelayan kebumen terdapat pada jenis ikan demersal yang bernilai ekonomi tinggi seperti ikan bawal putih (*Pampus argenteus*), lobster (*Panulirus homarus*), udang jerebung (*Penaeus merguiensis*) dan ikan kakap merah (*Lutjanus campechanus*).

**Kata kunci :** Perikanan tangkap, Nelayan, Produksi, Nilai produksi, Jenis tangkapan

## ABSTRACT

Capture fisheries in Kebumen Regency has a large potential of fish resources. The status of capture fisheries in Kebumen Regency includes the development of the number of fishermen/RTPs, fishing vessels, fishing gear, fishing production volume, fishery production value, types and catches of fish. The results of the research of Kebumen fishermen are included in the category of small fishermen based on the use of boat types less than 5 GT and outboard motor boats. The number of growth of fishermen and the number of fishing boats in Kebumen Regency increased throughout 2016-2020. Types of fishing gear used by fishermen in Kebumen district include fixed gill nets, drift gill nets, trammel nets, fishing rods and hooks. The production volume and production value of the Kebumen capture fishery decreased in 2020 due to the COVID-19 pandemic. Potential species of catches of Kebumen fishermen are found in demersal fish with high economic value such as white pomfret (*Pampus argenteus*), lobster (*Panulirus homarus*), jerebung shrimp (*Penaeus merguiensis*) and red snapper (*Lutjanus campechanus*).

**Key words:** Capture Fisheries, Fishermen, Production, Production Value, Fish Catch
