

CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusion

According to the results of the discussion in the previous chapter, it can be concluded that speaking English is challenging enough to be practiced. As an announcer could do to be professional and must to be kind to the tourist that come to the PT KAI Purwokerto. Also, as an Announcer must considering the way of speak. Actually, the announcer felt the difference in the sound of language, but also knew that the difference is not important, unconsciously, in fact, the many and different sounds that have grouped together in a single sound are important to mark the differences in meaning. Furthermore, we call the sound unit a phoneme, or in other words a phoneme is the smallest sound unit that distinguishes meaning.

B. Suggestion

There are many shortcomings and advantages in this research. Therefore, several things must be considered in developing a website using the English language in the future. The writer suggests that all the parties involved in the tourism sector (tourism stakeholders) need to improve their English language skills, especially in Speaking. Furthermore, the world also rotates and develops rapidly. For that reason, people must be able to adapt quickly and do not miss the changes in technology. We have to upgrade our skills, learn something new, try everything and make it a great experience. Furthermore, because job vacancies are getting hard to find daily, we must have something that people do not have and make us look more convincing than others to get accepted for the job. These suggestions are written based on the writer's research. It would be nice if these suggestions could be implemented because it intends to improve the way of speaking in English.
