

## V. CONCLUSION AND SUGGESTION

### A. Conclusion

The conclusion of this research based on the discussion are:

1. The treatment of batik dye effluent degradation by *Aspergillus* sp. 3 result and combination of using goat urine is affected to produce macronutrient.
2. The incubation at 72 hours is the most optimum period to produce macronutrients in batik dye effluent degradation by *Aspergillus* sp. 3.

### B. Suggestion

Suggestion for further research regarding the addition other material of fermentation in order to produce more optimum macronutrients.
