

CHAPTER V

CONCLUSION AND SUGGESTION

This final chapter is divided into two sections: conclusion and suggestion. This chapter includes a summary of the results and discussion regarding the students' perception towards the use of Google Translate as machine translation in learning procedure text and also provides some suggestions related to this research to improve the next research.

5.1 Conclusion

Based on the results and discussions, the conclusion that can be drawn are as follows :

1. The implementation of using Google Translate as a machine translation in translating procedure text has several advantages for the students. With the help of Google Translate, students could easily understand the content of the text by translating each word and sentence. By using alternative words feature, the students could learn that a single word in English had multiple meanings in Bahasa Indonesia. This feature also helped the students improve their vocabulary. Additionally, students could better understand the importance of using words that are suitable for the context they were working on.
2. Students' perception on the use of Google Translate as machine translation in learning procedure text had positive perception. Students

believed that Google Translate may not be completely reliable in translating English text, but it could be a useful tool in the translation process. The students were used to bring manual dictionaries during English lessons, allowing them to translate procedure text without relying on Google Translate. The students also believed that Google Translate could still be a translation tool, but by rechecking the grammar rules because Google Translate often ignored grammar rules and provide inaccuracies in the sentence structure and word order.

5.2 Suggestion

Based on the results of this research, the researcher proposed several suggestions that could be useful considerations:

1. From the result of this research, students were expected to use Google Translate in translating more wisely. The features of Google Translate should be used appropriately to gain knowledge. Students also expected to use Google Translate with responsibility.
2. The government is expected to expand internet connectivity, particularly in regional areas and provide students with internet access. This can be achieved by extending the internet network's reach and providing students with internet quotas at school. This will enable students to use the internet for effective teaching and learning.

3. The result of this research is expected to give a positive contribution and provide useful information for other researchers who discuss the same topic as this research.
