HUBUNGAN POWER OTOT TUNGKAI, KOORDINASI MATA KAKI DAN TINGKAT KONSENTRASI TERHADAP AKURASI SHOOTING SISWA EKSTRAKURIKULER FUTSAL SMA N 1 PLUMBON

Naufal Taufiqurrahman, Rohman Hidayat, Fuad Noor Heza

Latar Belakang: Penelitian ini bertujuan untuk mengetahui seberapa besar pengaruh dari hubungan *power otot tungkai*, koordinasi mata kaki, dan tingkat konsentrasi terhadap akurasi *shooting* futsal.

Metodologi: Penelitian ini menggunakan metode korelasional. Penelitian dilakukan di SMA Negeri 1 Plumbon dengan 17 sampel siswa ekstrakurikuler futsal dengan teknik total sampling. Instrumen tes *power otot tungkai* menggunakan *standing board jump*, koordinasi mata kaki menggunakan *soccer wall volley test*, tingkat konsentrasi menggunakan *grid concentration test*, dan akurasi *shooting* menggunakan *shooting* 9 target. Analisis data melibatkan uji korelasi *pearson product moment*, regresi linear berganda, serta sumbangan efektif dan sumbangan relatif.

Hasil Penelitian: Ada hubungan *power otot tungkai* dengan akurasi *shooting* atas nilai $p = 0,000$, $r = 0,759$, dan $SE = 40,1\%$, ada hubungan koordinasi mata kaki dengan akurasi *shooting* atas nilai $p = 0,000$, $r = 0,813$, dan $SE = 23,3\%$, ada hubungan tingkat konsentrasi dengan akurasi *shooting* atas nilai $p = 0,004$, $r = 0,658$, dan $SE = 22,9\%$ serta nilai koefisien determinasi ketiga variabel bebas $R^2 = 0,773$, artinya kontribusi simultan sebesar 77,3%.

Kesimpulan: Terdapat hubungan antara *power otot tungkai*, koordinasi mata kaki, dan tingkat konsentrasi, terhadap akurasi *shooting* futsal.

Kata Kunci: *Power otot tungkai, koordinasi, tingkat konsentrasi*

Abstract

THE RELATIONSHIP BETWEEN LEG MUSCLE POWER, FOOT EYE COORDINATION AND CONCENTRATION LEVEL ON SHOOTING ACCURACY OF EXTRACURRICULAR STUDENTS FUTSAL SMA N 1 PLUMBON

Naufal Taufiqurrahman, Rohman Hidayat, Fuad Noor Heza

Background: This research is intended to how much influence the power relationships of the muscle limbs, eye coordination, and concentration levels have on the accuracy of futsal shooting.

Methods: This research uses correlational methods. The research was conducted at Plumpon State High School with 17 samples of extracurricular futsal students using total sampling techniques. Instruments use standing board jump, foot eye coordination using soccer wall volleyball test, concentration level using grid concentration test, and shooting accuracy using shooting 9 targets. Data analysis involves pearson product moment correlation tests, double linear regression, as well as effective and relative contributions.

Results: There is a correlation between the muscle power and the shooting accuracy of $p = 0,000$, $r = 0.759$, and $SE = 40.1\%$, there is a coordination of the foot with the shoot accuaracy of $p=0,000$, $r=0.813$, and $SE=23.3\%$, there's a relationship between the level of concentration and shooting precision of $p=0.004$, $r=0.658$, and $SE=22.9\%$ as well as the third determination coefficient of the free variable $R^2=0.773$, meaning a simultaneous contribution of 77.3%.

Conclusion: There's a relationship between muscle power, eye coordination, and concentration, to futsal shooting accuracy.

Keywords: *Leg muscle power, coordination, concentration level*
