

CHAPTER V CONCLUSIONS AND SUGGESTION

A. Conclusion

Based on the research results and discussions described in this research, it can be concluded that:

1. The age characteristics of respondents have a median of 14 years with the youngest age being 12 years and the oldest age being 15 years and the majority of parents' income being < Rp 2,195,690
2. There were differences in pretest posttest knowledge and motivation in the intervention group
3. There were no differences in pretest posttest knowledge and motivation in the control group
4. There were no differences in pretest knowledge and motivation in the intervention and control groups
5. There are differences in posttest knowledge and motivation in the intervention and control group

B. Suggestion

Based on the research that has been carried out, researchers have several suggestions as follows:

1. For Educational Institutions
Health education using Instagram media can be used to develop knowledge by conducting other research using other media, not just Instagram.
2. For Health Institutions
Instagram media can be used as a health education innovation to prevent early marriage so that it can support the implementation of promotive and preventive efforts in basic health services or community health centers.
3. For Schools
Instagram media can be used as a means of providing education to students about preventing early marriage.

4. For Further Researchers

It is hoped that future researchers will be able to maximize the social media features used in providing health education and researchers can use other media besides Instagram as a medium for health education.
