

CHAPTER V PERSONAL REFLECTION

The achievement of receiving a Silver Medal in the Environmental Science category at the International Invention Competition for Young Moslem Scientists (IICYMS) 2023 is a significant honor for the author. This accomplishment is not only the result of hard work but also of consistent dedication to exploring one's potential and the ability to collaborate effectively with a team. The process of attaining this result has been a journey that has provided numerous lessons and served as a foundation for developing a more mature personal character.

The author realizes that this journey is not solely about the final outcome but also encompasses valuable lessons learned from overcoming every obstacle encountered. The ability to face challenges and the flexibility to respond to various situational changes have become skills that have been further strengthened throughout this process. The author is determined to continue evolving, not only by enhancing competencies but also through introspection and efforts to address shortcomings while optimizing untapped potential.

This award serves as a symbol of personal achievement and a greater encouragement to inspire fellow students, particularly at University of Jenderal Soedirman, to always have confidence in achieving their goals. The author hopes that this experience can motivate the younger generation to continue innovating, collaborating, and not hesitate to explore their abilities in various fields.
