

V. CONCLUSION AND SUGGESTION

A. Conclusion

Based on the research results it can be concluded that:

1. The welfare level of Primates at BBKSDA Riau show that *Symphalangus syndactylus* has an average total score of 86.75 with a welfare classification of Very good, *Hylobates agilis* has an average total score of 81.76 with a welfare classification of Very good, and *Macaca fascicularis* has an average total score of 78.97 with a welfare classification of Good. The highest welfare score performed by Micky, and the lowest score performed by Bino.
2. The eleven Primates were not yet matched with the behavior release category.

B. Suggestion

This study suggests several actions: Improving the suitability of cages referring to the Peraturan Menteri Lingkungan Hidup dan Kehutanan Republik Indonesia Number P.20/MENLHK/SETJEN/KUM.1/4/2019 concerning Technical Specifications for Transport Cages and Transit Cages for Wild Animals, adding activities or facilities that stimulate the natural behavior of Primates, medical checkups on Primates that have not been examined; and minimizing noise and visual disturbances from humans and other animals to reduce stress.
