

CHAPTER V

CONCLUSION

A. Conclusion

Based on the results of the research and discussion, the following conclusions can be drawn:

1. The Jakarta Disability Card (KPDJ) program in Kayu Putih Subdistrict, East Jakarta, has been well implemented. This program runs in accordance with the provisions of DKI Jakarta Governor's Regulation Number 44 of 2022 concerning the Provision of Social Assistance in the Context of Social Protection, which is the legal basis for the implementation of the program. This can be seen from 4 (four) parameters, namely:
 - a. The target of KPDJ Program Recipients has been implemented optimally.
 - b. The Procedures or Mechanisms for the Implementation of the KPDJ Program have been carried out well.
 - c. The Term and Amount of KPDJ Program Assistance have been fulfilled in accordance with applicable regulations.
 - d. Monitoring, Evaluation and Reporting of the KPDJ Program has been carried out well, in accordance with the provisions.

2. The main supporting factors for the implementation of this program include the main supporting factors for PKD Social Assistance for Persons with Disabilities including clear regulations through the Governor of DKI Jakarta Regulation Number 44 of 2022, the enthusiasm of families of people with disabilities, the alertness of family members and social companions in handling obstacles, routine assistance from the Subdistrict, RT, and social companions to beneficiaries, the existence of socialization from the district before the registration of new recipients. On the other hand, the inhibiting factors that arise include obstacles to prospective beneficiaries in the data verification process, obstacles to prospective beneficiaries in the DTKS system process, obstacles to prospective beneficiaries in understanding the administrative procedures for data renewal and technical obstacles in ATM machines that hinder the disbursement of assistance. However, these obstacles can still be overcome in general with a quick response from the district and social companions.

B. Suggestion

Based on the results of the above research, two suggestions can be submitted as follows:

1. Aimed at the DKI Jakarta Provincial Government through the Social Service, it is necessary to consider increasing the nominal assistance to be more relevant to the living needs of people with severe disabilities, to be more in line with their basic needs and current economic conditions.
2. Aimed at the Kayu Putih Apparatus, it is necessary to improve the quality of supporting facilities for the implementation of the program, especially internet network access (Wi-Fi) in the environment. This step is important so that the process of data collection, data updates in the DTKS, and reporting can run faster and more accurately, thereby minimizing delays in verification and distribution of assistance.
