

V. CONCLUSION AND IMPLICATION

A. Conclusion

All independent variables, namely amount of labor, investment, HDI, and number of business units simultaneously have an effect on the dependent variable of the level of GRDP output of manufacturing sector. This means that the increasing amount of labor, investment, HDI, and number of business units will increase the output of manufacturing sector in Central Java.

B. Implication

Based on the conclusion above, there are several implications as follows:

1. Both central governments should expand employment in order to accommodate the available labor force and reduce unemployment rate as well as improve the quality of labor, so that it can further improve the people welfare and ultimately increase the GRDP output in the manufacturing sector.
2. Both regional governments as regulators should be able to create a conducive investment climate so as to attract both domestic and foreign investors to invest in Central Java Province.
3. Both regional governments should seek to increase business units through various policies.
