

SUMMARY

This research aims to determine how the effect of Good Corporate Governance is proxied by managerial ownership, audit committee and the board of directors as well as firm size and leverage on firm value. The population in this research are construction industry companies listed on the Indonesia Stock Exchange for the period 2015-2019. Sampling was carried out using a purposive sampling method. There are 9 companies that meet the criteria as research samples so that the total sample size is 45 data. This research uses multiple linear regression analysis to measure the effect of independent variables on the dependent variable using SPSS. The results of this research indicate that the board of directors has a positive significant effect on firm value, audit committee has a positive marginally significant effect on firm value, managerial ownership and company size have a significant negative effect on firm value. Meanwhile, the leverage does not have a significant effect on firm value. The implication of this research is that companies are expected to implement corporate governance in accordance with existing regulations, as well as improve the quality of financial performance, namely company size and leverage to increase firm value.

Keywords: Good Corporate Governance, Company Size, Leverage, Firm Value
